## Product information

DKT presents the only DOCSIS 3.1 capable Service Termination Point ready for installation in DOCSIS 3.0 networks. Euro form factor style Push-in-Outlet is the ideal coax service termination point to ensure fast migration from DOCSIS 3.0 to 3.1 by means of Do-It-Yourself (DIY) upgrade kits. Once the initial Service Termination Point installation is completed by professional installers, future outlet frequency upgrades, required for increased DOCSIS bandwidth, can be done by exchanging the Push-In-Filter supplied in a DIY kit. This kit has to contain a Push-in-Filter and a new face plate. With the current DOCSIS 3.0 return path frequency range of 5-65MHz, the initial installation of Euro PIO 1-4 65 as the Service Termination Point, is the best choice to ensure immediate access to 1300MHz (DOCSIS 3.1), and at the same time serve as platform for future DIY upgrades of the Push-In-Filter. In Push-In-Outlet installations the incoming cable is fitted with a suitable F-connector at once, and the Diplex filter can be exchanged over and over again, without damaging or cutting the incoming cable.

## push-in-outlet installation tools

### Product information

Push-in-outlet installation will often be done in tight confined spaces, a line of tools designed for stripping and compression in confined spaces has been developed to ease PIO installation.

### PCS Family

The PIO Cable Stripper PCS-xx will work in extension of the cable direction and the head will, with ease, fit to the tight spaces usually found in coax outlet installation cases.

The PCT tools are available in 3 different versions, to match different cable dimensions.

To prevent contamination of the braid and braid penetration of skin, the PCS tool has a braid brush that allows the installer to straighten the braid without use of the fingertips

Knifeblock color	Black	Grey	Orange

### PCT

The POI Compression Tool PCT has a small narrow head and are suitable for compression of F-56-CX3 7.0QM Short connector as well as other common F-connectors and the 90-FMC and 90-C connectors. Furthermore with exchange of the plunger other Cablecon connectors can be compressed with the PTC tool

# connectors for push-in-outlets

## Product information

Depending if new installations are made or the outlets are replacing a previous installation , the cable length and installation space will be different.

In the majority of cases the incoming cable will be terminated e.g. by means of a Short quickmount Male F-connector and connection to the Push-in-filter of the outlet through the 90FF connector.

For more challenging installations where flexibility or length of the incoming cable does not allow the 90FF connector to be used, the 90FF jumper cable will provide plenty of mechanical flexibility.

For cases where the Mini cable is used the 90-FMC connector will fit directly on the cable.

## push-in-taps for push-in-outlets

### Product information

For loop through installations all types of Push-in outlets can be supplemented with the Push-In-Tap. Once the initial installation is made, by mounting the drop and loop through cables in the Push-in-Tap, the Push-In-Filter characteristics of the outlet can be changed over and over again, simply by replacing the PIF filter for another version. The flexibility offered by maintaining the loop-through part of the installation and only replacing the filter to meet future needs means that future replacements is so easy that even do-it-yourself upgrades is possible.
